About me

Fullstack developer with 4+ years of experience in TypeScript/Node.js/React, including 3 years at PIX working on authentication and educational content.

I design and ship end-to-end products. At PIX, I built interactive educational simulators, reduced network calls sixfold, deployed SSO, and built a GDPR-compliant logging application.

Since October 2024, I have been the independent Founding Engineer behind [MusicKeeper.app](#), a music-management app built solo and in public.

Currently open to new opportunities.

Skills

Programming: TDD, Hexagonal Architecture, Clean Code, Unit/integration/end-to-end testing

Languages: JS, TypeScript, Go

Frontend: React, Vue/Nuxt, Astro, Tailwind, Svelte

Backend: NodeJS, AdonisJS, Fastify, HapiJS, GoFiber, REST APIs

Databases: PostgreSQL, MySQL, Supabase

Tools: Docker, Git, CI/CD, Vite, Playwright, Figma, Jest, React Testing Library, AI-assisted development (Claude, GPT)

Experience

MusicKeeper, Founding Engineer (Independent)

Remote

Tech stack: Svelte, TypeScript, AdonisJS, Docker

Oct 2024 – present

Solo public development of a cross-platform music management app using a generative-AI workflow (Claude, GPT).

- End-to-end product design and development, from requirements to deployment.
- Hexagonal architecture with unit, functional, and end-to-end tests; CI/CD releases, Docker images, and pull-request previews.
- Link-based additions with automatic title/artist/cover detection (MusicBrainz) and multi-platform links (Spotify, Deezer, Apple Music, Qobuz, Bandcamp).
- Installable PWA with offline access.

PIX, Fullstack Developer

Paris

Tech stack: Ember.js, TypeScript, Vue.js, Hapi.js

Sept 2020 – Oct 2023

I worked on PIX's content team, then its access team, in 5–6-person squads. Content designed interactive assessments and improved business workflows; access handled authentication.

- Redesigned access to PIX educational content for students, organizations, and certification centers: sixfold fewer network calls and instant access.
- Developed a GDPR-compliant logging application.
- Contributed to the company's internal design system (pix-ui).
- Modernized the content back office in a 147-file technical migration, making maintenance easier.
- Designed configurable Vue.js educational simulators (video conferencing, messaging).
- Deployed single sign-on (SSO) authentication for a regional academy.

Nurun/Publicis, Frontend Developer - Work-study

Paris

Tech stack: HTML, CSS, JavaScript

Sept 2016 – Aug 2017

- Integrated designs.
- Followed up on bug fixes across various projects.
- Deployed websites.
- Managed client feedback.

Nurun/Publicis, Frontend Developer - Internship

Paris

Tech stack: HTML, CSS

May 2016 – July 2016

Projects

EasyDocker

Mar 2023 – Oct 2023

Tech stack: Go, Typescript, React, Docker

Web app for creating and managing docker-compose files (team of 5, HETIC master's project).

- Frontend: stack CRUD, YAML generation, Vite/Vitest migration.
- Backend: networking feature, database service, integration tests + Docker CI.

Education

HETIC, Master in Computer Science – Montreuil

Oct 2021 – Nov 2023

- Technology watch report: WebGPU
- Master's final project: EasyDocker

HETIC, Bachelor in Computer Science – Montreuil

Sept 2019 – Sept 2021

ITIC, BTS in Computer Science – Paris

Jan 2016 – June 2017

Lycée Edmond Rostand, Scientific Baccalaureate in General Education – St Ouen L'Aumone

Sept 2012 – June 2015

Certifications

Opquast

Aug 2021

Tech stack: Web Quality

Mastery of web quality in web projects

Languages

French: Native

English: Read, spoken, written
